PROFILE SUMMARY

AI & GTM Systems Engineer specializing in autonomous, production-grade systems - from signal-driven outbound engines to agentic AI pipelines that research, verify and decide on live data. Currently architecting end-to-end GTM infrastructure at OneGTMLab for B2B data clients: a fully autonomous engine that detects buying signals, assembles AI-verified buyer committees and runs multi-channel outreach with zero manual steps. Previously delivered 200+ advanced automation workflows spanning CRM enrichment, voice qualification, invoice processing and predictive deal intelligence for clients across the USA, Europe, the Middle East and India.

SKILLS

Languages & Core: Python, JavaScript, SQL, Flask, REST APIs & Webhooks

AI & LLMs: Claude API & Agent SDK, OpenAI, Agentic Pipelines, Voice AI, Parallel.ai Web Research

Data & Infrastructure: Supabase (PostgreSQL), Railway, GitHub Actions CI/CD, pytest & ruff, Apify

Sales & GTM: HubSpot API, Smartlead, HeyReach, Aimfox, Prospeo, ClearCue, Apollo, SalesQL

Automation & Media: n8n, Slack API, LinkedIn API, WhatsApp API, HeyGen, Cloudinary, Plex ERP

WORK EXPERIENCE

AI & GTM Systems Engineer - OneGTMLab

2026/06 - Present | Ahmedabad, Gujarat, India

- Own end-to-end systems delivery for two B2B SaaS clients - Forager.ai (850M+ record contact-data platform) and ClearCue (buying-signal intelligence platform) - from architecture through production operation.
- Built Forager's autonomous GTM engine: 10 live buying signals (hiring, funding, tech adoption, engineering blogs, LinkedIn activity) scored across a 200+ account market, with top accounts refreshed, enriched and launched into outreach every month with zero manual steps.
- Engineered a Claude-powered buyer-committee picker that researches every candidate on the live web, verifies current employment against two independent sources, and assembles committee-shaped picks - product, engineering and data leaders - per account.
- Run ClearCue's own outbound growth engine on their product's data: a daily automated pipeline that stages buying-signal lists in Supabase, enrolls prospects into founder-voice LinkedIn and email campaigns, and funnels every reply into a unified tracker - 4 give-first event campaigns shipped, 100+ replies including enterprise meeting requests.
- Operate the production platforms: 75+ Python modules, 280+ automated tests, CI/CD to Railway, GitHub Actions scheduling, and HMAC-authenticated webhook meshes streaming HubSpot, Smartlead, HeyReach and ClearCue events in real time.

AI Automation Engineer (Intern > Full-Time) - iTechNotion Pvt Ltd

2025/05 - 2026/06 | Ahmedabad, Gujarat, India

- Architected and deployed 200+ advanced automation workflows and AI agent systems for clients across the USA, Ireland, and India, integrating third-party APIs (n8n, OpenAI, HubSpot, Apollo, Voice AI, Plex ERP) to replace manual processes with zero-touch, scalable solutions.
- Designed AI-powered lead enrichment and voice qualification pipelines (HubSpot, Voice AI, OpenAI, Apollo) that automated end-to-end CRM workflows, reducing manual lead research time for international clients.
- Built zero-touch invoice processing and deal intelligence systems (Plex ERP, OpenAI, Slack) that eliminated manual data entry and provided predictive risk alerts for sales teams.
- Engineered autonomous email outreach and meeting intelligence workflows (n8n, InboxPlus, Apollo, Google Calendar) that managed multi-touch sequences and delivered pre-call briefings automatically.

PROJECTS

Autonomous GTM Engine - Forager.ai

- Architected a complete signal-to-outreach pipeline (Python, Claude, Supabase, HubSpot, Railway) that turns 10 live buying signals into ranked accounts, AI-verified buyer committees, enriched contacts and personalized email + LinkedIn sequences - a full monthly cycle with no human in the loop.
- Hardened for production with 280+ automated tests, versioned releases, QA gates (ruff + pytest) and real-time Slack alerting on replies, failures and positive-intent detection.

ClearCue Outbound Growth Engine

- Built and operate ClearCue's fully automated give-first outbound engine, running daily on Supabase cron + GitHub Actions: pulls buying-signal lists from the product, stages people, companies, campaigns and replies in Supabase as a single source of truth, and enrolls prospects into LinkedIn (Aimfox) and email (Smartlead) sequences - with colleague discovery via Prospeo on a verified-email waterfall and heavy message variation for deliverability.

- Layered safety screens (web-verified competitor exclusion table, team/geo/domain checks) and a unified cross-channel reply tracker with auto-tagged founder inboxes; 4 event campaigns shipped - 1,900+ prospects reached, 100+ replies, including meeting requests from enterprise accounts - each campaign doubling as a live product demo.

AI Enrichment Agent - Autonomous Data Processing System

- Architected an autonomous lead-enrichment workflow (n8n, OpenAI, Apify, SalesQL) that detects new entries, gathers verified company/contact data from multiple sources, applies structured selection logic, and updates records automatically - replacing slow, inconsistent manual lead research.

AI Voice Lead Qualification & Follow-Up Orchestration Engine

- Built an AI voice orchestration system (HubSpot, Voice AI, OpenAI, Google Drive, Slack) that auto-triggers outbound calls on new CRM contacts, classifies intent, writes structured CRM notes, stores recordings, and sends intelligent follow-up emails with fallback sequences for unanswered calls.

Autonomous Outreach & Follow-Up Engine

- Engineered an end-to-end outbound engine (n8n, InboxPlus, AI personalization) that sends personalized emails, runs structured follow-up sequences, stops instantly on reply, and tracks sent/delivered/opened/replied metrics in a single dashboard.

AI-Powered Invoice Processing & ERP Matching Engine

- Built a zero-touch AP pipeline (Outlook, OpenAI, Plex ERP API, Excel, OneDrive) that detects invoice emails, extracts structured data from PDFs with strict validation, matches POs against ERP, verifies amounts, updates Plex status, and archives renamed files to OneDrive.

AI-Powered Deal Intelligence & Risk Monitoring Engine

- Engineered a daily deal intelligence system (HubSpot, OpenAI, Slack) that enriches active deals with engagement activity, AI-calculates conversion probability and risk levels, flags stalled deals, and pushes Slack alerts with recommended actions.

AI-Powered Pre-Call Meeting Intelligence Engine

- Designed a nightly meeting intelligence pipeline (Google Calendar, HubSpot, Apollo, OpenAI, Slack) that pulls next-day meetings, matches CRM records, enriches attendee companies, and posts structured AI briefings to Slack/Discord.

AI-Powered WhatsApp Agent & Lead Management System

- Built a context-aware conversational WhatsApp agent (WhatsApp API, OpenAI) that identifies intent, dynamically qualifies leads through follow-up questions, logs structured data by phone number, and confirms or escalates when complete.

EDUCATION

INDUS UNIVERSITY	2025
<i>B.Tech Computer Engineering</i>	
CGPA - 9.30
